Re: Structural Connection Details
         Fe26 2", Fe26 3", Al13 2", & Al3 3" Connections to Wood Deck and Concrete
         Province of Ontario, Canada

Mr. Flatt,

Per your request, Eclipse Engineering, P.C. (EEPC) designed the anchorage for the guardrails mentioned above. We find that the following calculations meet or exceed the requirements of the 2012 OBC and ASCE 7-16.

It is assumed the guard height will not exceed 1070 mm per Sec. 9.8.8.3 of the 2012 OBC. Per Sec. 9.8.8.2 of the 2012 OBC,1-2 Family Dwellings is assumed to have a maximum force of 1.0 kN. All Use Groups are assumed to have a maximum of 0.75 kN/m with a 2.44 m tributary length. The concrete has a designed strength of 17.25 MPa with a thickness of 100 mm. All wood fasteners are required to have a minimum (68mm)x blocking underneath the posts. Please see the following documentation for details.

Eclipse Engineering has reviewed the anchorage of the guardrails only. We take no responsibility for any other element of the structure or for the structure as a whole.

Please contact us with any questions.

Sincerely,
**Eclipse Engineering, P.C.**

Sean Smith, E.I.T.
Project Engineer

$\dfrac{t_d}{W} = 123.59 \ mm$ Minimum Thread Needed for All Use Groups

ASSY® VG CSK

The ASSY® VG Countersunk head (CSK) screw is the multipurpose fully threaded screw used in wood-to-wood, wood-to-steel and wood-to-concrete applications. All fully threaded screws are suitable for timber reinforcements. With the long threaded shank, high withdrawal capacities are achieved. Its self-tapping tip allows for more effective penetration and reduced spacing. Closer end- and edge-distances are possible, reducing the timber sizes required. The VG CSK screw is also suitable for use with the 90° cup and 45° wedge washer.

TABLE 3—REFERENCE WITHDRAWAL DESIGN VALUES (W)[2,3] (lbf/in)

NOMINAL FASTENER DIAMETER (inch)	FOR SPECIFIC GRAVITIES (SG) AND EQUIVALENT SPECIFIC GRAVITIES (ESG) OF: [4]				
	Sawn Lumber and Glulam				PSL
	SG = 0.55	SG = 0.49	SG = 0.42	SG = 0.35	ESG ≥ 0.50
W_{90} - For screws driven into the side grain of the main member, such that the screws are oriented perpendicular to the grain and loaded in direct withdrawal[1]:					
$^1/_4$	230	202	169	137	156
$^5/_{16}$	279	248	212	176	179
$^3/_8$	317	280	237	188	211
$^1/_2$	331	297	251	209	223
W_{45} - For screws driven into the side grain of the main member, such that the screws are oriented at 45 degrees to the grain and loaded along the axis of the screw:					
$^1/_4$	197	173	145	118	156
$^5/_{16}$	239	212	182	151	179
$^3/_8$	272	240	203	163	211
$^1/_2$	284	254	215	179	223

For **SI:** 1 inch = 25.4 mm, 1 lbf = 4.45 N.

[1] Values must be multiplied by all adjustment factors applicable to wood screws, in accordance with the NDS.
[2] SWG ASSYplus VG and VG 4 screws must be installed and used in dry in-service conditions, such that the wet service factor, C_M, is 1.0 in accordance with the NDS.
[3] Reference withdrawal design values are to be multiplied by the length of thread penetration into the main member. Main member penetration must be at least 8 times the nominal diameter. Thread length does not include the length of the tip.
[4] The specific gravity used for design purposes must be the assigned specific gravity for sawn lumber per Table 12.3.3A of the NDS (Table 11.3.3A of the NDS for the 2012 IBC, Table 11.3.2A of the NDS for the 2009 IBC) or the applicable Specific Gravity for Fastener Design for glulam, given in Section 5 of the NDS Supplement; and the equivalent specific gravity (ESG) must be the equivalent specific gravity given in the applicable ICC-ES evaluation report on the PSL product.

TABLE 4—REFERENCE HEAD PULL-THROUGH DESIGN VALUES (W_H)[1,2,3] (lbf)

NOMINAL FASTENER DIAMETER (inch)	HEAD TYPE	MINIMUM SIDE MEMBER THICKNESS, t_s (inches)	FOR SPECIFIC GRAVITIES (SG) AND EQUIVALENT SPECIFIC GRAVITIES (ESG) OF: [4]				
			Sawn Lumber				PSL
			SG = 0.55	SG = 0.49	SG = 0.42	SG = 0.35	ESG ≥ 0.50
$^5/_{16}$	Countersunk, Countersunk Milling Pocket	$1^3/_8$	414	350	281	216	398
$^3/_8$	Countersunk, Countersunk Milling Pocket		474	408	334	266	491
$^1/_2$	Countersunk, Countersunk Milling Pocket		474	408	334	266	491

For **SI:** 1 inch = 25.4 mm, 1 lbf = 4.45 N.

[1] Tabulated head pull-through design values, W_H, must be multiplied by all adjustment factors applicable to wood screw withdrawal, in accordance with the NDS.
[2] Design values apply to connections with minimum side member thicknesses, t_s, as given above.
[3] SWG ASSYplus VG and VG 4 screws must be installed and used in dry in-service conditions, such that the wet service factor, C_M, is 1.0 in accordance with the NDS.
[4] The specific gravity (SG) used for design purposes must be the assigned specific gravity for sawn lumber per Table 12.3.3A of the NDS (Table 11.3.3A of the NDS for the 2012 IBC, Table 11.3.2A of the NDS for the 2009 IBC) or the applicable Specific Gravity for Fastener Design for glulam, given in Section 5 of the NDS Supplement; and the equivalent specific gravity (ESG) must be the equivalent specific gravity given in the applicable ICC-ES evaluation report on PSL product.

TABLE 5—CONNECTION GEOMETRY REQUIREMENTS[1]

CONDITION		MINIMUM DIMENSION (in terms of nominal screw diameter, D)	
		LATERALLY LOADED SCREWS	AXIALLY LOADED SCREWS
Screws Installed Perpendicular to the Surface of the Wood Member			
End distance		7D (10.5D in D-Fir)	5D (7.5D in D-Fir)
Edge distance	Lateral Loading parallel to grain	3D	-
	Lateral Loading perpendicular to grain	7D	-
	Axial Load on fastener	-	3D
Spacing between fasteners in a row		7D (10.5D in D-Fir)	5D (7.5D in D-Fir)
Spacing between rows[2]	Loading parallel to grain	4D	-
	Loading perpendicular to grain	5D	-
	Axial Load on fastener	-	2.5D
Screws Installed at an Incline[3]			
End distance, a_{AXIAL}		5D (7.5D in D-Fir)[4]	
Edge distance, e_{AXIAL}		3D	
Spacing between fasteners in a row, $S_{P\,AXIAL}$		5D (7.5D in D-Fir)	
Spacing between rows of fasteners, $S_{Q\,AXIAL}$		2.5D	

[1] End distances, edge distances and screw spacing must be sufficient to prevent splitting of the wood, or as required by this table, whichever is the more restrictive.
[2] Within a row, fasteners may be staggered up to 2D to further reduce the potential for splitting.
[3] See Figures 4 and 5.
[4] End distance must also be sufficient to ensure that the screw is fully embedded in the wood member.

TABLE 6—RECOMMENDED DIAMETER OF PREDRILLED HOLES[1] (inch)

NOMINAL FASTENER DIAMETER (inch)	APPLICABLE LOAD CONDITION AND SPECIFIC GRAVITY		
	Screws Subject to Lateral Load		Screws Loaded Axially
	SG ≤ 0.5	SG > 0.5 and PSL	0.35 ≤ SG ≤ 0.55 and PSL
$1/4$	$5/32$	$5/32$	$5/32$
$5/16$	$13/64$	$7/32$	$13/64$
$3/8$	$15/64$	$1/4$	$15/64$
$1/2$	$17/64$	$5/16$	$17/64$

For **SI:** 1 inch = 25.4 mm.

BY INSPECTION ASSY VGS CSK 3/8" (10mm) MEETS THE MINIMUM LOAD REQUIREMENTS

6 Warnings

- The anchor design methods in PROFIS Engineering require rigid anchor plates per current regulations (AS 5216:2018, ETAG 001/Annex C, EOTA TR029 etc.). This means load re-distribution on the anchors due to elastic deformations of the anchor plate are not considered - the anchor plate is assumed to be sufficiently stiff, in order not to be deformed when subjected to the design loading. PROFIS Engineering calculates the minimum required anchor plate thickness with CBFEM to limit the stress of the anchor plate based on the assumptions explained above. The proof if the rigid anchor plate assumption is valid is not carried out by PROFIS Engineering. Input data and results must be checked for agreement with the existing conditions and for plausibility!

- Condition A applies where the potential concrete failure surfaces are crossed by supplementary reinforcement proportioned to tie the potential concrete failure prism into the structural member. Condition B applies where such supplementary reinforcement is not provided, or where pullout or pryout strength governs.

- Refer to the manufacturer's product literature for cleaning and installation instructions.

- For additional information about ACI 318 strength design provisions, please go to https://submittals.us.hilti.com/PROFISAnchorDesignGuide/

- Hilti post-installed anchors shall be installed in accordance with the Hilti Manufacturer's Printed Installation Instructions (MPII). Reference ACI 318-19, Section 26.7.

Fastening meets the design criteria!

Input data and results must be checked for conformity with the existing conditions and for plausibility!

7 Installation data

Anchor type and diameter: KWIK HUS-EZ (KH-EZ)-SS316 1/4 (1 5/8)

Profile: no profile

Item number: 2245630 KH-EZ SS316 1/4"x2"

Hole diameter in the fixture: d_f = 0.375 in.

Maximum installation torque: 216 in.lb

Plate thickness (input): 0.250 in.

Hole diameter in the base material: 0.250 in.

Recommended plate thickness: not calculated

Hole depth in the base material: 1.836 in.

Drilling method: Hammer drilled

Minimum thickness of the base material: 3.250 in.

Cleaning: Manual cleaning of the drilled hole according to instructions for use is required.

Hilti KH-EZ-SS316 screw anchor with 1.625 in embedment, 1/4 (1 5/8), Stainless steel, installation per ESR-3027

7.1 Recommended accessories

Drilling	Cleaning	Setting
• Suitable Rotary Hammer • Properly sized drill bit	• Manual blow-out pump	• Torque wrench

8 Remarks; Your Cooperation Duties

- Any and all information and data contained in the Software concern solely the use of Hilti products and are based on the principles, formulas and security regulations in accordance with Hilti's technical directions and operating, mounting and assembly instructions, etc., that must be strictly complied with by the user. All figures contained therein are average figures, and therefore use-specific tests are to be conducted prior to using the relevant Hilti product. The results of the calculations carried out by means of the Software are based essentially on the data you put in. Therefore, you bear the sole responsibility for the absence of errors, the completeness and the relevance of the data to be put in by you. Moreover, you bear sole responsibility for having the results of the calculation checked and cleared by an expert, particularly with regard to compliance with applicable norms and permits, prior to using them for your specific facility. The Software serves only as an aid to interpret norms and permits without any guarantee as to the absence of errors, the correctness and the relevance of the results or suitability for a specific application.

- You must take all necessary and reasonable steps to prevent or limit damage caused by the Software. In particular, you must arrange for the regular backup of programs and data and, if applicable, carry out the updates of the Software offered by Hilti on a regular basis. If you do not use the AutoUpdate function of the Software, you must ensure that you are using the current and thus up-to-date version of the Software in each case by carrying out manual updates via the Hilti Website. Hilti will not be liable for consequences, such as the recovery of lost or damaged data or programs, arising from a culpable breach of duty by you.

Input data and results must be checked for conformity with the existing conditions and for plausibility!
